

Energy audits.

Energy efficiency will be of key importance in the drive towards Net Zero greenhouse gas emissions by 2050.

It is often called the first fuel and is an essential component of all emissions reduction scenarios.

ZebraCarbon has the experience and expertise to identify and generate feasible energy efficiency projects from a technical and a business case perspective.

Our services to support your project development:

Energy audits

- High quality energy audits to BS EN 16427 (Buildings, Process or Transport)
- Energy Savings Opportunity Scheme (ESOS) – Lead Assessor services
- Energy -intensive process audits for manufacturing industry

In addition, we can deliver:

- Proof of projected savings using globally accepted IPMVP standard Measurement & Verification (M&V) protocol
- Realistic costing of any required capital investment project plus guidance on funding routes

Experience:

ZebraCarbon personnel are experienced energy efficiency professionals. The group is led by Keith Routledge, a qualified energy engineer of 40 years' experience in the UK, Europe, USA, and China.

We have delivered detailed costed energy efficiency audits to a wide range of clients from individual schools to large multinational companies with facilities in various countries.

Expertise:

We hold accreditation with the Energy Institute, Environment Agency, the Investor Confidence Project, and the Efficiency Evaluation Organisation (EVO). We are proudly technology agnostic and always look for the best route to energy efficiency.

We also work within the global drive towards mitigating climate change and will help our clients steer a path using energy efficiency to reduce greenhouse gas emissions in the most cost-effective way.
